

Luis Carmona — Software Engineer

SUMMARY

Passionate and skilled web developer experienced in frontend and backend technologies, including JavaScript, HTML, CSS, Tailwind CSS, and MERN Stack. Proficient in Agile and DevOps methodologies, with a proven track record of leading successful software releases through cross-functional collaboration and optimized delivery processes. Well-versed in tools such as Git, GitLab, and AWS, I am committed to staying at the forefront of technology.

WORK EXPERIENCE

Software Release Lead at TD Bank, Miami, FL

March 2023 — Present

- Led the release planning process, collaborating with development, testing, and operations teams to ensure alignment and successful delivery of software releases.
- Developed and executed release schedules, resource allocation plans, and risk mitigation strategies, ensuring on-time and high-quality software deliveries.
- Release management methodologies (Agile, DevOps, ITIL)
- Developed and executed release schedules, resource allocation plans, and risk mitigation strategies, ensuring on-time and high-quality software deliveries.

Technologist at Strategio | Miami, FL

January 2023 — Present

- Concepts Learned: DevOps, Agile, Scrum, CI/CD, Continuous Testing, Site Reliability, Memory Management, Abstraction, Inheritance, Concurrency, Logging, Test Driven Development, Behavioral Driven Development.
- Worked with AWS console as well as AWS CLI on various projects.
- Created CI/CD pipeline using Jenkins.
- Used Version Control tools such as GitHub and GitLab.

Software Engineer at 100devs, Miami, FL

January 2022 — January 2023

- Collaborated with a team of developers to build modern and responsive web applications using best practices
- Incorporating applications, graphics, audio, and video clips into client websites
- Built semantically structured full-stack web applications

Recent Projects:

- **Serenity Yoga App (Fullstack Web App) Github** – a web application that provides users with a platform to upload, share, and discover yoga videos. It is built using React on the front end and Amazon DynamoDB as the database. Users can create their own personalized playlists, rate, comment on videos, and connect with other community members.
- **Movie CRUD APP (Fullstack Web App) Github** – Utilizing the MERN Stack, this project intricately weaves together JavaScript, EJS, MongoDB, Express, and Node to craft a dynamic movie search application.
- **Yu-Yu Hakusho Character Selector (Fullstack Web App) Github** – Character selection screen that changes the background image based on the character you select
